

CryptoPay PCI Compliance

Where a merchant's card transactions are entered into the MagTek/Magensa PCI DSS compliant platform in accordance with such party's recommended protocols and transmitted directly to Worldpay via such platform in an encrypted manner, Worldpay does not require any additional evidence of merchant's PCI compliance for such transaction. Please note, that the above sentence applies only to a merchant's use and transmittal of customer card transactions to Worldpay via the MagTek/Magensa PCI DSS compliant platform and does not address our acceptance or validation for all PCI requirements of a merchant, specifically those that fall outside of the transaction flow supported by the MagTek/Magensa process as required by the payments brands.

Please access the below links which provide evidence of Worldpay and Magensa's compliance.

Magensa
